Description

The XO6201C is one Low Power Spread Spectrum Frequency Multiplier part of RSM SSC family. The output frequency is same as crystal, and is designed to reduce electromagnetic interference (EMI) by spreading the clock.

The Spreading Mode/Ratio is programmed in fab by ROM codes. The XO6201C provides spread, refer to different option.

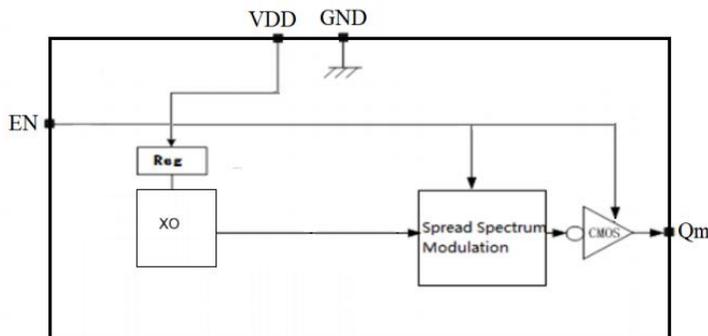

Benefits

- Reduction in EMI
- System cost saving
- Reduced system complexity
- Faster time to market

Applications

- Fundamental Crystal Oscillator
- 7050, 5032, 3225, 2520,2016

Storage Temperature.....	-65°C to +150°C

Note:
Stresses greater than those listed under MAXIMUM RATINGS may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect reliability.
