

Features

- Spread Spectrum IC (Programmable)
- Operating frequency range: 20MHz~27MHz
- 0.25~160MHz Output Frequency range
- Operating voltages: 1.62 V to 3.63V
- Operating temperature: -40°C to +125°C
- Configurable spread spectrum settings:
 - 7 kinds of spread:
 $\pm 0.0625\%$, $\pm 0.125\%$, $\pm 0.25\%$, $\pm 0.5\%$, $\pm 1\%$, $\pm 1.5\%$, $\pm 2.0\%$
- OE disable function
- 3 kinds of Rise time/Fall time:
Default mode, Fast mode and Slow mode
- Modulation Frequency: $F_{IN}/804$
- Spread Profile: Triangle
- Used for Fundamental Crystal Oscillator
- Used for TDFN-8L package
- AEC-Q100 qualified, PPAP capable, and manufactured in IATF 16949 certified facilities.
- Grade 1 temperature range (- 40°C ~ +125 °C)

Benefits

- Reduction in EMI
- System cost saving
- Reduced system complexity
- Faster time to market

Description

The RS1XO6502QZAE is a versatile 1x Active EMI management IC designed to provide system wide reduction of Electromagnetic Interference (EMI) and Radio Frequency Interference (RFI) from clock and data sources. RS1XO6502QZAE allows significant system cost savings by reducing the number of circuit board layers, ferrite beads, shielding and other passive components that are traditionally required to pass EMI regulations.

This series offer the easy programmability of frequencies and other parameters, they also have a wider operating temperature range, from -40°C to +125°C. In addition to a 2×2.0 mm package that will enable electronics manufacturers to save board space. Users will be able to program the products to the required output frequency, as well as to the required spread spectrum settings.

This will also significantly contribute to performance, lower power requirements, fast development cycles, and low-volume production.

Applications

- IP Camera
- Printers/MFPs
- Media players
- DTV/Set-top Box
- Embedded digital video devices
- LCD Panel Modules
- Automotive components
- Networking devices
- Surveillance

Maximum Rating

Supply Voltage to Ground Potential.....	4V
OE pin	$V_{DD}+0.3V$
Storage Temperature.....	-40°C to +125°C

Note:

Stresses greater than those listed under MAXIMUM RATINGS may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect reliability.

Recommended Operating Conditions

Timing Chart

(1) Output Waveform and Level

(2) OE/ $\overline{ST}$ Function and Timing

OE/ $\overline{ST}$ terminal	Osc. circuit	Output status
"H"	Oscillation	Specified frequency: Enable
"L"	OE: Oscillation	Low (Weak pull down ^{*3}): Disable
	$\overline{ST}$: Oscillation stop	

*1 The period from OE/ $\overline{ST}$ = V_{IL} to OUT = Low (weak pull down) (Disable)

*2 The period from OE/ $\overline{ST}$ = V_{IH} to OUT = Enable

*3 Pulled down with Output pull down resistance (R_{DN})

* Judging the start of output when output waveform is observed.

* OE/ $\overline{ST}$ terminal voltage level should not exceed supply voltage when using OE/ $\overline{ST}$ function.
Please note that OE/ $\overline{ST}$ rise time should not exceed supply voltage rise time at the start-up.

* Please do not use the OE/ $\overline{ST}$ terminal in the open state.

Typically the output will be enable when OE/ $\overline{ST}$ is open state, but the input pull resistance is large and OE/ $\overline{ST}$ terminal may drop to "L" level and be disable due to noise or leakage current.
